Nokia, Ottawa, ON

Re: 67V Software Developer Co-Op (WLS)

Dear Ms Stephania Daza Casas:

Being immersed in the software development industry for more than ten years, I have gained broad knowledge and rich experience in software design and programming, I hope to apply my experience and skills as a software developer to support Nokia's needs as I value your innovation-focused and inclusive culture, admire your distinguished reputation and relate to your vision to create technology helping the world act together.

Working as a Software Developer and later as a SaaS System Engineer in Micro Focus, I developed and advanced skills in Python/BASH, C++, Java, AWS, consolidated knowledge in object-oriented design, REST API, etc. During the period, I worked on a world-class functional testing tool UFT, then moved to SaaS Delivery Team as a SaaS System Engineer where I innovated, designed and implemented automations to simplify repetitive tasks and standardize operational processes for our organization.

Apart from work experience, I have successfully completed several academic projects during my Master of Applied Computing program, where I not only applied my capability formed from employment experience, but also employed the knowledge and skills obtained during the graduate education including TensorFlow/Keras, Neural Network, MongoDB, ex cetera.

I sincerely appreciate the opportunity sharing more about my software design and programming skills with you in an interview. Thank you for your time reviewing my application.

Best regards,

Wen Dong
