WHITE WHALE

Re: DATA SCIENCE INTERN

Dear White Whale Recruiters,

Having immersed in software development for a long time, I have developed solid software design (OOD) skills and formed mature Agile engineering mindset
Whenever a complex assignment comes in, I break it down into small modules, prioritize and pick the most valuable and critical particles to start with; during the journey, I examine and design to ensure heading to a simple and clear solution, framing complexity and uncertainty to a low-entropy paradigm; however, failure is inevitable especially in challenging task, fail it fast by POC and by early delivery of runnable software to clients, it is not parlous but building block towards success.

Artificial intelligence pushes the boundaries of technology towards sphere of human by data analytics with machine learning, I am fascinated about it since its birth to thriving, have been preparing myself as much as I could to make a shift, including learning, healthy vegetarian dieting, and regular meditation.

Thank you for the time reviewing my application, wish you a good one!

Best regards,

Wen Dong
