CALGARY /ALTAML APPLIED AI LAB

Re: DATA SCIENCE /INTERN

Dear ALTAML Recruiters,

Being immersed in the software development industry for more than ten years, with tremendous interest in data science, I was inspired to pursue graduate level study in advanced computing focusing in AI area, I hope to apply my knowledge and skills as a data science intern to support ALTAML's needs as I value your core values – Humble, Happy and Agile, admire the opportunity and friendly environment for new practitioner.

Working as a Software Developer and later as a SaaS System Engineer in Micro Focus, I developed and advanced skills in Python/Pandas/Numpy, C++, AWS, and consolidated knowledge on software Object Oriented Design. During the period, I worked on a world-class Functional Testing tool primarily written in C++, and then moved to our SaaS Delivery Team to work as a SaaS System Engineer where I designed and implemented automations to simplify and standardize operational process in the SaaS Delivery organization.

Apart from work experience, I have successfully completed several Machine Learning academic projects during my Master of Applied Computing program, where I not only applied programming and design capability formed from employment experience, but also employed the knowledge and skills obtained during the graduate education including TensorFlow/Keras, Neural Network, Machine Learning, MongoDB, ex cetera.

I sincerely appreciate the opportunity sharing more about my software design, programming, and data analysis skills during an interview. Thank you for your time reviewing my application.

Best regards,

Wen Dong
